Letter Number 21-24RD

To: Kohler Residential Dealers & Installers

Attn: Principals, Sales Managers & Kohler Sales Representatives

**Kohler Launches into Clean Energy with KOHLER Power Reserve Energy Storage System**

We are pleased to announce your opportunity to join Kohler's entry into the clean energy market with the upcoming launch of the KOHLER Power Reserve energy storage system. The new line will offer customers a modular backup system to store and access the solar energy produced by their home's solar panel systems for additional energy savings. Kohler offers both AC- and DC-coupled units, allowing installers and dealers to service all customers with a single, reliable brand and for users to access the type of power source/output required for their homes without purchasing additional accessories.

Additionally, homeowners can access and manage their stored solar power in the KOHLER Power Reserve system through an intuitive app that provides insights into real-time power flow for the home, timeline of power information for the day, historical statistics for the system, and allows users to choose the operation mode for their system (back-up, self-supply, time-of-use or custom) to personalize their battery's storage and output.

For non-solar powered homes, the KOHLER Power Reserve energy storage system offers a way to store power from the grid during times of lower rates and then rely on the batteries for power during peak rate periods while providing the home with back-up power in case of a power outage.

The new collection joins KOHLER Power's existing residential product lines, including standby and portable generators. To learn more about the new KOHLER Power Reserve energy storage system, visit the [KOHLER Clean Energy website](#).

The new offering allows existing Kohler dealers an exciting opportunity to expand their product offering to customers and opens up opportunities in the rapidly growing residential solar market. Interested partners can learn more about the advantages of being a KOHLER dealer by visiting the [KOHLER Clean Energy Dealer website](#) or reaching out to their Area Manager. Details about order placement, product training and appropriate certification will be forthcoming in the next few weeks.

Sincerely,

William Schnell  
Sr. Product Manager – Residential Energy
